**FACULTY SENATE**

**SOUTHEAST MISSOURI STATE UNIVERSITY**

**FACULTY SENATE BILL 24-A-XX**

Approved by the Faculty Senate  
XXXXXX

**BRIEF SUMMARY:** This bill revises text of the Research section of Chapter 3 of the *Faculty Handbook* such that hyperlinks are provided to the appropriate source, incorrect or outdated information is removed, and redundancy is minimized.

**REVISING “FACULTY PROFESSIONAL RESPONSIBILITES: RESEARCH:  
SCIENTIFIC MISCONDUCT”**

**BE IT RESOLVED:** Subject to the passage and approval of this bill, the content the subsection Scientific Misconduct in Chapter 3 of the *Faculty Handbook* will be amended by replacing the existing content with the content below. The effect of this change is to strike the entirety of the policy and procedure from the Faculty Handbook and replace this text with a link to the official university policy.

1 Scientific Misconduct

2

3 Science rests on a foundation of mutual trust. To an extraordinary degree, that trust is thoroughly  
4 justified. However, scientists are subject to all human frailties and temptations, including at times  
5 the temptation to engage in scientific misconduct. Though such misconduct is rare, once  
6 misconduct is detected, it must be dealt with quickly and forcefully in order to sustain the  
7 atmosphere of trust necessary for science. Not only must individual scientists behave in a  
8 trustworthy manner, but must also take collective responsibility for detecting, judging, and  
9 controlling scientific misconduct. This is not an easy task for an enterprise founded on integrity;  
10 trust must not be replaced with suspiciousness. However, when there is ample reason to suspect  
11 misconduct, that information should be brought to the attention of individuals responsible for  
12 assuring that scientists connected with their institution are behaving responsibly. To that end,  
13 Southeast Missouri State University has established a policy on scientific misconduct, has  
14 designated an officer responsible for receiving allegations of scientific misconduct, and has  
15 created a process for resolving such allegations.

16

17 A crucial element of any fair and effective policy on scientific misconduct is a process that will  
18 distinguish instances of genuine and serious misconduct from insignificant deviations from  
19 acceptable practices. The policy adopted by Southeast Missouri State University will allow such  
20 distinctions to be made in a manner that minimizes disruptiveness and protects the conscientious,  
21 honest scientist from false, trivial, or mistaken accusations.
