

To Whom It May Concern,

I am a Middle School Science Education Major. I am looking forward to student teaching in your classroom this semester and using this experience to become more prepared for when I teach in my own classroom in the future. The thing I am looking forward to the most is learning more about classroom management skills and gaining hands on experience so that I can use it to better prepare me for my first years of teaching. After graduation I'm hoping to find a teaching position in one of the local schools nearby.

I am happy to teach any area of science that is available but the fields that I have the most passion for would be Astronomy and Earth Science. Astronomy is a subject that I not only love to learn about but also love to talk and share with other people; additionally, I like teaching about Earth Science because it is a very important subject and it tells a lot about our world and the importance of it. I love talking about how interesting and unique the world that we live in is and both of these subjects showcase it wonderfully.

I have a friendly personality, and a noticeable enthusiasm and love for the subject that I teach. I like to use technology in the classroom to not only help with student learning but also provide them with opportunities to see scientific experiences and interactions. Science has been a subject that I have a passion for, and I can't wait to share that with your students.

Sincerely,

John Doe
