

Moodle Videos on a MAC

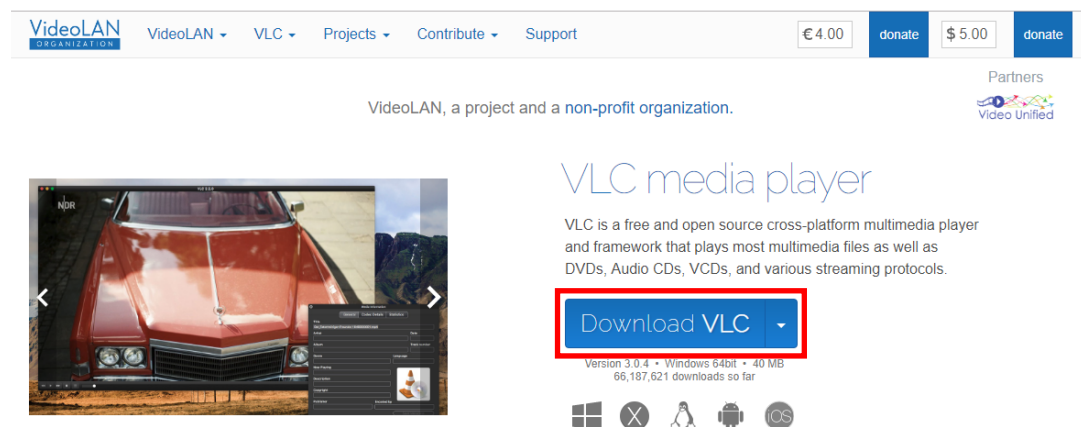

In order to play videos on a MAC computer through Moodle, you typically have to have VLC Media Player.

Step 1: Navigate to <https://www.videolan.org/index.html>

The screenshot shows the VideoLAN website header with navigation links: VideoLAN, VLC, Projects, Contribute, and Support. There are two donate buttons: one for € 4.00 and one for \$ 5.00. Below the header, it says "VideoLAN, a project and a non-profit organization." and "Partners Video Unified". The main content area features a video player showing a red car, the text "VLC media player", and a description: "VLC is a free and open source cross-platform multimedia player and framework that plays most multimedia files as well as DVDs, Audio CDs, VCDs, and various streaming protocols." Below this is a blue "Download VLC" button with a dropdown arrow. Underneath the button, it says "Version 3.0.4 • Windows 64bit • 40 MB" and "66,187,621 downloads so far". At the bottom, there are icons for Windows, Linux, Mac OS, Android, and iOS.

Step 2: Click **Download VLC**

This screenshot is identical to the one above, but the "Download VLC" button is highlighted with a red rectangular box to indicate it should be clicked.
