Step 1: Click the wireless connection icon in the system tray. If it’s unavailable, then click the battery icon.

Step 2: Select the Wi-Fi option.
Ubuntu Wi-Fi Setup

**Step 3:** From the window which appears, select **Select Network**.

![Select Network Window]

**Step 4:** From the window which pops up, select **SoutheastSecure** or **SoutheastResNet**.

![Select Network Window with SoutheastSecure]
Step 5: In the window which appears, change the Authentication option to **PEAP**. Check the box next to **No CA certificate is required**. Type your **SE Key** into **Username** and your **SE Password** into **Password** at the bottom.

Step 6: Click **Connect**. The device should now be connected to the network, but may still require registration. Instructions are available on the following page.
You have to register your wireless network card one time per semester before the wireless connection will work.

To do this:

- Open your internet browser.
- Follow the ResNet connection instructions on the ResNet Registration webpage. If your browser does not redirect you to the ResNet page, type in [http://splat.semo.edu](http://splat.semo.edu) in the address bar.

Didn’t work for you? If your problem still persists, call the IT Help Desk at 573-651-4357.
