

How to find the MAC address of the XBOX One via the LAN connection

It is important to note that Wi-Fi media devices will be unable to use Southeast Secure/Southeast ResNet wireless services, as most do not come preloaded with the necessary software to be compatible with SEMO's wireless encryption – therefore a wired Ethernet connection must be used.

1. Plug the Xbox ONE console into the LAN Port using a Category 5/6 Ethernet cable.
2. Press the Xbox button to navigate to Home

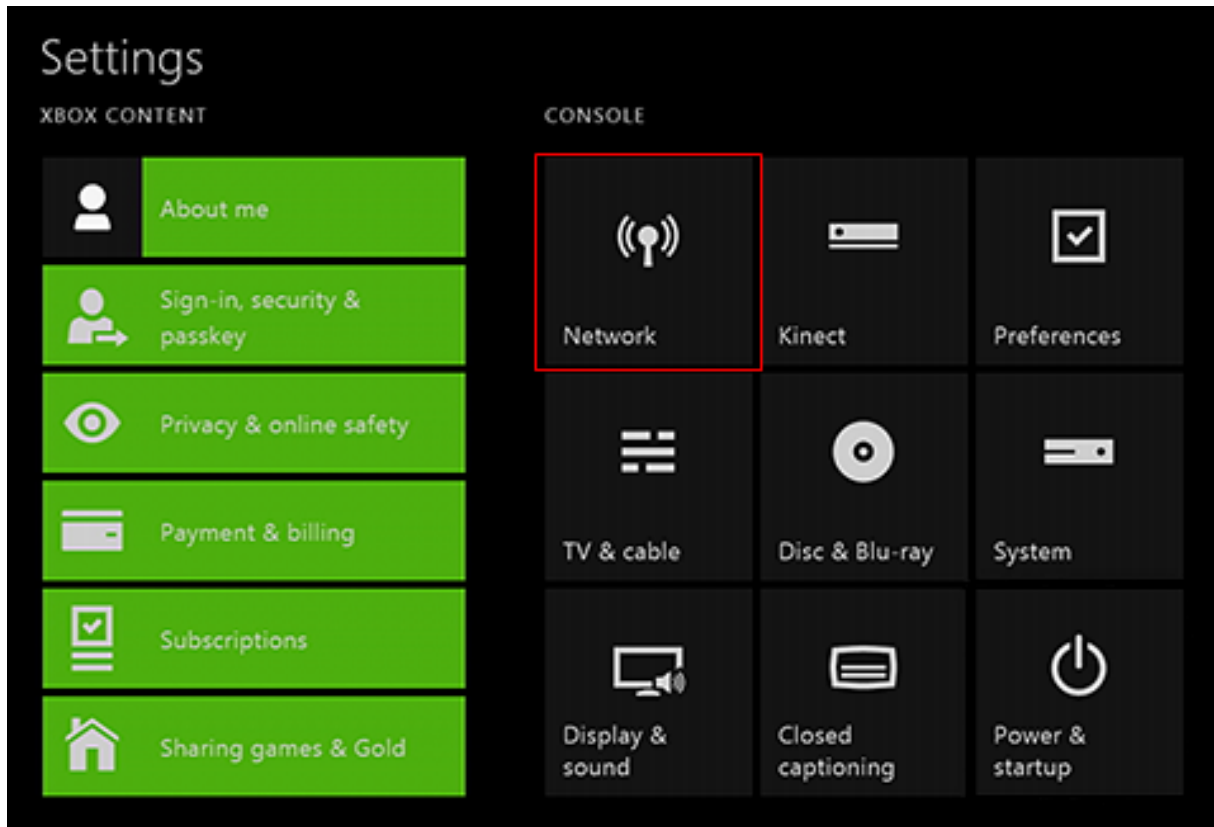

3. Press the Menu button and select Settings (or select settings on the Home screen)

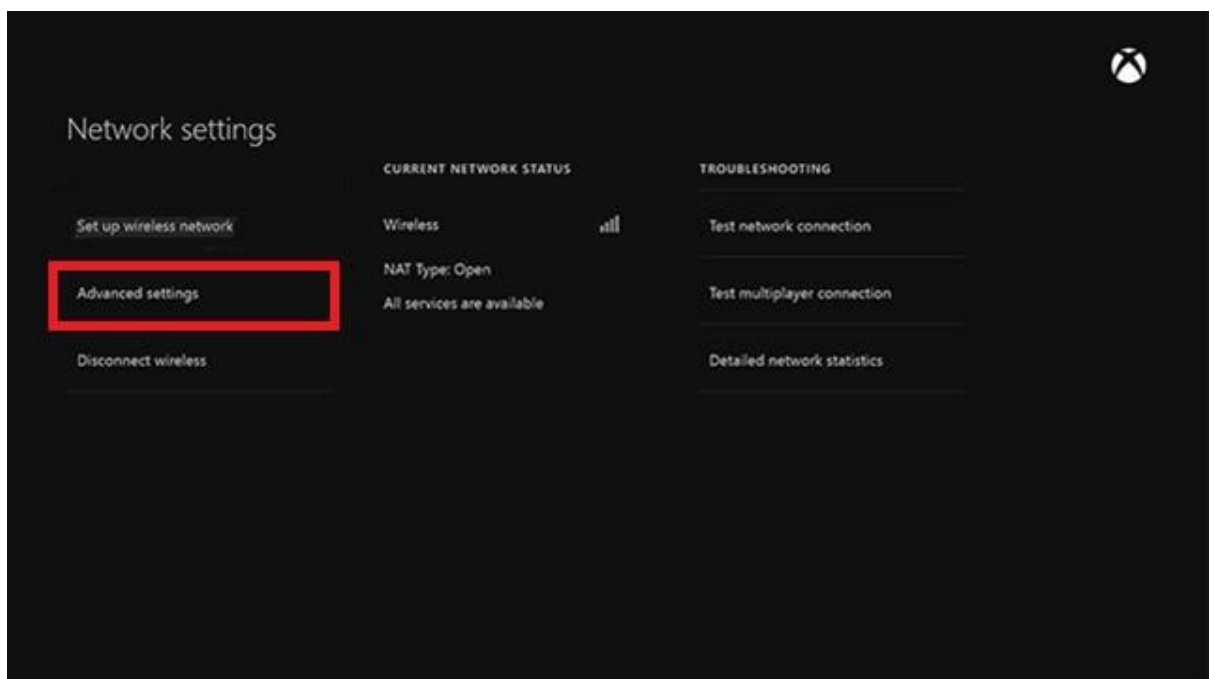

How to find the MAC address of the XBOX One via the LAN connection

4. Select Network

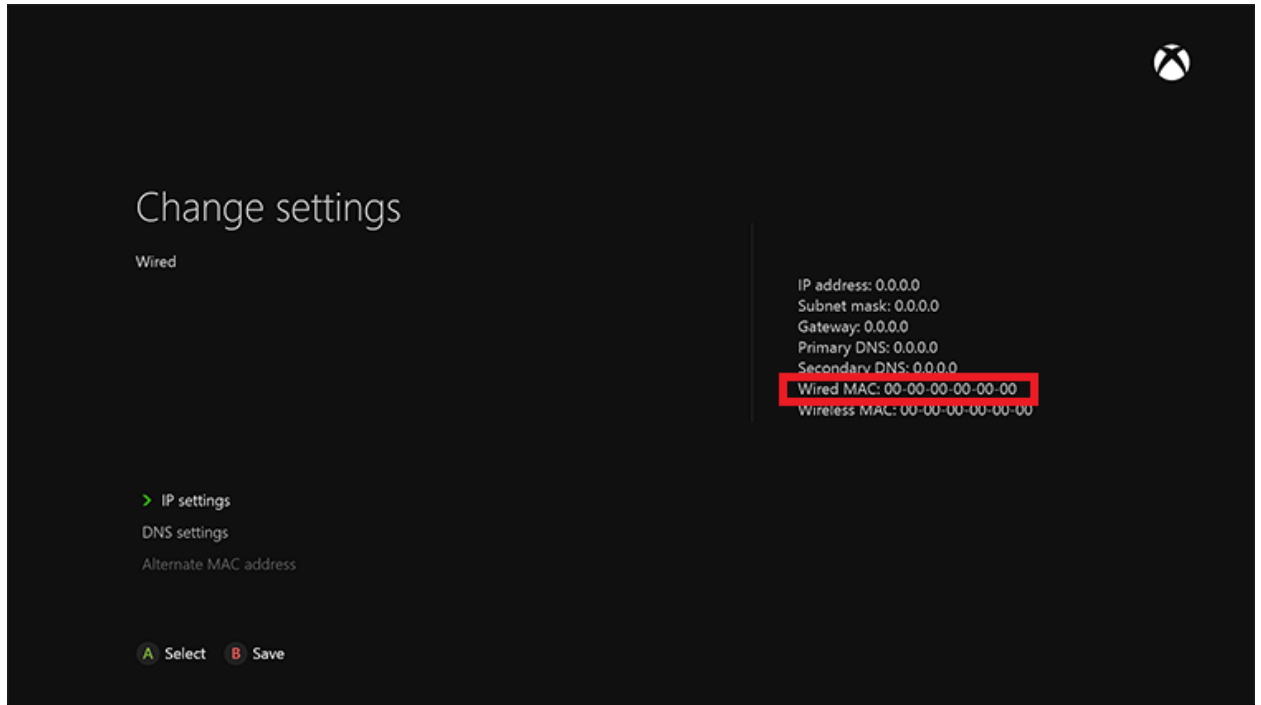

5. Select Advanced settings on the left most panel

How to find the MAC address of the XBOX One via the LAN connection

6. Your Wired MAC Address should be on display on the right
The MAC address will be made up of pairs of alphanumeric characters separated by colons or dashes (Eg: A1:B2:C3:4D:5E:6F)

Registering the Device

1. Using a computer, browse to <http://splat.semo.edu/gameconsoles/>
2. Enter your **Southeast Key** and **Password** for the Username and Password, and type the aforementioned MAC address into the MAC address field, ensuring to keep the colons in the address.
3. If you agree to the User Policies, select "Accept".
4. Restart the Xbox ONE, and check to ensure that it is connected.
