## Bachelor of Science (BS)

# Electrical and Control Option

Engineering technology emphasizes the application of scientific and engineering techniques to a variety of real-world problems. Application is the key word in this definition, in that engineering technology emphasizes practical applications as well as theory. Engineering technologists work in the job spectrum between the engineer and the skilled technician with responsibilities closest to those of the engineer.

Students in the electrical and control option focus on the electrical power and control systems. Within the area of power, students study motors, generators, complex power, three-phase systems, and transmission concepts. Within the area of controls, students examine many different control technologies, including microprocessors, FPGAs, PLCs, industrial robots, and other industrial controllers.

### Engineering technology: electrical & control students will...

- Gain technical proficiency in the engineering technology practice and engage in life-long learning.
- Effectively use technology for problem solving, decision making, implementation, management, and optimization of systems and processes.
- Work effectively in a team environment.
- Maintain the highest ethical and professional standards with commitment to protect the public interest, safety, and the environment.
- Gain theory and laboratory practice in areas of digital and electronic systems; industrial instrumentation; electromechanical/mechanical/optical sensors; actuation systems; AC and DC drives; electrical machines and control; power electronics; energy management; microprocessors/embedded controls; automatic process control systems; and industrial automation and robotics.
- Be educated in the advanced techniques of system design and installation using innovative state-of-the-art technologies reinforced throughout the program by integrated laboratory experiences.

### Career Planning

Demonstrated Career Proficiency is a Requirement of all Southeast Students		
CL001/CL002	First Semester	Complete the FOCUS2 assessment and develop a Career Action Plan.
CL003	Junior Year	Students gain information about career planning and job searching resources.
CL004	Senior Year	Students demonstrate advanced proficiency by identifying a position in their field, developing a cover letter, and tailoring a resume for the position. Materials are critiqued to ensure preparedness for a successful job search.
Career Services, located in Academic Hall 057, provides professional career advising to guide students in their career development.
